SUMMARY

B.Tech student in CSE (AI & ML) with foundational expertise in Python Programming, Machine Learning, and Generative AI, including Large Language Models (LLMs). Applied Prompt Engineering and developed AI-powered applications, demonstrating practical experience in workflow automation and REST API integrations through projects. Eager to contribute to innovative AI agents and intelligent workflow solutions.

SKILLS

Python Programming, Generative AI, Machine Learning, REST APIs, Git/GitHub, Large Language Models (LLMs), AI agents, Data Structures & Algorithms, SQL fundamentals, Prompt Engineering, n8n, Workflow automation, Chatbot development, API integrations, Business process automation, JavaScript, Node.js, MongoDB, Next.js, Express.js, React, Hostinger, C++, C, CSS, HTML

PROJECTS

Researcher

An agentic AI-powered research automation platform that streamlines problem analysis, literature review, and solution generation.

React, Node.js, MongoDB(Vector), n8n, arxiv API, Github API, Google Search API, Gemini/OpenAI API

- Developed a Generative AI platform using multi-phase Large Language Model (LLM) workflows for autonomous research analysis.
- Orchestrated efficient workflow automation using n8n to manage parallel AI pipelines and integrate various external APIs.
- Accelerated research processes significantly, reducing end-to-end time from weeks to under an hour through AI automation.

Whats-App Automation

An AI-powered customer engagement and automation platform providing intelligent, always-available AI assistants directly within WhatsApp numbers.

Node.js, Express.js, MongoDB, Socket.IO, WhatsApp Web.js, Puppeteer, Chromium, Google Gemini API, OpenAI Embeddings API, React, Tailwind CSS, Git

- Developed a Generative AI assistant, leveraging Google Gemini API and OpenAI Embeddings API for personalized customer engagement.
- Designed a full-stack dashboard (React, Express.js) enabling non-technical users to control AI agent behavior for business process automation.
- Enhanced customer service and optimized business process efficiency by enabling instant lead engagement and conversation tracking.

HR Analytics

Developed an AI-powered Generative AI Employee Analytics Platform to democratize HR data analysis and generate actionable management insights, supporting business process automation.

Node.js, Express, MongoDB, React, CSS, Axios, Recharts, Lucide React, Google Gemini API, OpenAI API, Multer, csvtojson

- Integrated Google Gemini 2.5 Flash and OpenAI REST APIs, enabling natural language queries for dynamic MongoDB aggregation pipelines in HR analytics.
- Designed an interactive analytics dashboard with Recharts for dynamic data visualization, featuring twenty-five pre-built analytical questions.
- Democratized HR data analysis, enabling non-technical professionals to access workforce insights without requiring SQL or programming knowledge.

HackHub

Developed an AI-powered MERN-stack platform for hackathon data aggregation and normalization, leveraging Generative AI for

enhanced descriptions and personalized recommendations.

React, JavaScript (JSX), CSS, Node.js, Express.js, MongoDB, bcrypt.js, Google Gemini API, Devpost, Devfolio, Unstop

- Implemented Google Gemini API for Generative AI, utilizing prompt engineering to automatically rewrite raw hackathon listings into clear descriptions and score event quality.
- Designed and integrated an AI chat assistant on hackathon pages, providing immediate answers to user queries on eligibility and prize details, demonstrating chatbot development.
- Developed an admin dashboard to monitor scraping jobs and fine-tune quality thresholds, ensuring efficient, self-maintaining platform operation through automation tools.

WORK EXPERIENCE

Research Intern

AS&H Department PCCOE | June 2025 – Nov 2025

- Developed a Fuzzy Logic Machine Learning model in Python for admission prediction, achieving 95% accuracy.
- Implemented fuzzy inference and rule-based decision systems, applying analytical thinking to complex real-world data.
- Presented research findings at ICRTMS 2025, demonstrating strong communication skills; paper is under publication.

Software Developer Intern

CampusDekho.ai | May 2025 – Jul 2025

- Built and deployed full-stack web products using HTML, CSS, JavaScript, Node.js, and SQL/NoSQL databases.
- Developed AI-powered MHT-CET percentile, college predictor, and preference list tools for student decision-making.
- Managed the entire product lifecycle end-to-end, from design and testing to deployment and sales of 500+ lists.

ACHIEVEMENTS

- Won the INNS Nurathon Competition twice, demonstrating expertise in AI, neural networks, and Natural Language Processing applications.
- Secured first place in the national IEEE Innoquest 2025 Hackathon, demonstrating strong problem-solving and technical innovation.
- Achieved finalist status in the IEEE TechSangam 2025 Hackathon, developing AI and data-driven solutions for complex problems.

EDUCATION

- Pimpri Chinchwad College of Engineering, Pune B.Tech in Computer Science and Engineering with specialization in AI & Machine Learning, 2023–2027; CGPA: 6.95.
- Shramik Junior College, 12th Grade, 2022, 66%; Secured MHT-CET 96.14 percentile and JEE-MAIN 96.08 percentile.
- M.R.D. Malpani Vidyalaya, Sangamner 10th Grade, 2020; Achieved 92%.
